Section 01.3: The Problem

Eyebrow

THE REAL CHALLENGE

H1

When Everyday Information Isn’t Easy to Access

Supporting Copy

A large part of everyday life depends on visual information.

The Lancet Global Health report highlights that over 7.5 crore people in India live with near or distance vision impairment. Beyond the practical challenges, vision impairment can affect a person’s independence, mobility, education, employment, and quality of life. When everyday activities require additional assistance, it can also influence personal autonomy, confidence, and self-esteem. Everyone deserves the freedom to navigate the world with dignity, make their own choices, and live life on their own terms.

Supporting Point 01

Independence is a human right, not a privilege

Supporting Point 02

Privacy should never be compromised.

Supporting Point 03

Essential assistance should not always depend on connectivity.

Problem Card 01 - Limited Independence

Problem Card 02 - Fragmented Solutions

Problem Card 03 - Privacy Risks

Problem Card 04 - Connectivity Dependency

Problem Card 05 - Access & Affordability

ABOUT MYBLYK

H1

Built by Trinetrum Ventures. Shaped by a Real-World Need.

Supporting Copy

MyBlyk is an AI-powered assistive technology brand being developed by Trinetrum Ventures Private Limited.

The idea began with a simple question:

What if technology could help people access more of the information around them, without making them more dependent on technology itself?

Today, the team is working across AI, computer vision, embedded intelligence, software and product development to turn that idea into a practical wearable.

We are building step by step, from research and proof-of-concept systems toward real product prototypes and user testing.

Three Existing Highlight Blocks

Human-Centred

Deep-Tech Driven

India First Approach

Eyebrow

OUR ROADMAP

H1

From an Idea to a Product People Can Rely On

Supporting Copy

MyBlyk is being developed through a step-by-step journey, with each stage focused on validating technology, improving the product and learning from real-world use.

Phase 01: Ideation & Research

Identifying the problem, understanding user needs and exploring the right technology and product approach.

Date: October 2025

Phase 02: Technical PoC

Building and validating the core technical concepts through proof-of-concept development and testing.

Date: March 2026

Phase 03: Prototype & MVP

Developing product-design prototypes and building the MVP around validated technology and real-world requirements.

Date: July 2026

Phase 04: Beta Trial

Testing the MVP with selected users, gathering feedback and improving the product through real-world use.

Date: January 2027

Phase 05: Consumer Launch & Scale

Preparing MyBlyk for commercial availability and scaling the product based on user needs, market response and continuous development.

Date: April 2027 & Continue

Section 02.2: The Challenge

Eyebrow

EVERYDAY CHALLENGES

H1

Everyday Assistance Needs More Than a Camera.

Supporting copy

Understanding the world means more than detecting objects. It means making relevant information useful in everyday situations. MyBlyk is being developed around this wider need.

Card 01: Connectivity Dependency

Most of the assistive functions may depend on internet access, which is not always available.

Card 02: Context Matters

Identifying an object alone may not explain what is happening around the user.

Card 03: Natural Interaction

Assistive technology should feel simple to use, not like another complicated device.

Section 02.3: How It Works

Eyebrow

HOW MYBLYK WORKS

H1

From What You See to What You Hear.

Supporting copy

MyBlyk is being developed around a simple interaction: the glasses capture visual information, AI processes the relevant information, and the result is communicated to the user through voice.

The system can use different processing layers depending on the task.

Step 01: Input & Scene Sensing

The system senses its surrounding by capturing optical inputs and instantly combining them with motion data to build a foundational understanding of the environment.

Step 02: AI Understanding

Computer vision models process visual input to identify objects, text or elements within a scene.

Step 03: Decision Engine

A decision process helps prioritise information according to its relevance to the situation.

Step 04: Edge AI & On Device Processing

Core algorithmic functions run natively on the hardware, delivering **lightning-fast response times** and reducing unnecessary dependence on mobile networks or cloud computing.

Step 05: Mobile & Cloud integration

The system connects to a mobile via BLE(or bluetooth) to unlock broader functionality, leveraging mobile or cloud processing whenever complex task require additional computing power.

Step 06: Voice Output

Relevant information is communicated to the user through voice/audio output.

Step 07: User Action & Voice Querry

The user can immediately act on the received information or initiate a two-way voice dialogue with the assisstat to ask follow-up question and request deeper insights.

Example Interaction

User: “Hey MyBlyk, mujhe batao ki mere saamne kya hai?”

MyBlyk: A simple, contextual voice response based on what the system has identified.

Section 02.4: Technology

Eyebrow

TECHNOLOGY BUILDING

H1

Intelligence Built Around the User.

Supporting copy

MyBlyk brings together AI, computer vision, embedded intelligence and voice interaction in a wearable system being Developed into a unified wearable system for seamless, everyday assistance.

01. Computer Vision (Core)

AI models are continuously trained to perceive and interpret the visual world, delivering real time recognition of objects, text and spatial environments.

02. Edge AI (Core)

Selected core functions are intended to run on-device, reducing unnecessary dependence on mobile and cloud processing.

03. Embedded Intelligence (Core)

Evolving past early prototype, MyBlyk features a highly unified architecture where hardware and AI software are co-developed in perfect sync.

04. Privacy-Conscious Processing (Security)

Designed with a privacy first approach , the system strictly manages where data is handled and limits external connectivity to protect user confidentiality.

05. Voice Interaction (Interface)
An intuitive, hands-free audio interface lets users access critical information instantly, bypassing screens for an uninterrupted natural experience.

06. Dual-Layer Processing (Reliability)

A flexible hybrid pipeline handles routine tasks directly on-device, while seamlessly tapping into mobile or cloud network for heavier compute-intensive workflows.

Section 02.5: Product Series

Eyebrow

PRODUCT SERIES

H1

Three Experiences. One Purpose.

Supporting copy

MyBlyk is developing a product family for different everyday needs, from accessibility-focused assistance to independent exploration.

01. ASSIST SERIES

Designed around environmental awareness, accessibility and everyday assistance.

Assist aims to help users access visual information, understand their surroundings and approach daily activities with greater confidence.

For: Visually Impaired and Blind Users

Key areas

- Object and environment understanding
- Text reading
- Voice-based information
- Everyday accessibility assistance
- Navigation assistance
- Daily Utility Functions
- Find My Glasses

CTA: Pre-Book Now

02. ECHO SERIES

A future MyBlyk experience being planned for people with partial hearing loss.

The Echo series explores innovative cross-modal sensory technology, transforming vital ambient and environmental sound queues into accessible sensory inputs.

For: People with Partial Hearing Loss

Key areas

- Bone conduction audio
- Sound-to-vibration
- Conductive hearing loss support

- Inner-ear sound transmission concept
- Daily Utility Functions
- Find My Glasses

CTA: Available Soon

03. EXPLORER SERIES

Designed for the individual seeking proactive AI-driven environmental context while travelling or navigating new language.

The Explorer series serves as an intelligent wearable companion for open-world discovery , blending specialized utility with broader consumer functionality.

For: Independent Travellers, Explorers, Students and Researchers

Key areas

- Environmental understanding
- Travel assistance
- Information access
- Navigation-related assistance under development
- Voice interaction
- Daily Utility Functions

Section 02.6: Use Cases

Eyebrow

REAL-WORLD USE CASES

H1

Small Moments. Meaningful Assistance.

Supporting copy

MyBlyk is being developed for everyday situations where access to visual information can make a difference.

01. Reading

Get help accessing text from labels, signs, documents and other everyday materials through voice-based assistance.

02. Understanding Objects

Identify and understand objects in the surrounding environment.

03. Navigating Spaces

Support environmental awareness in indoor and outdoor spaces. Navigation-related capabilities are under development.

04. Shopping

Access information such as product labels and other visual details while shopping.

05. Travel

Get support when accessing information and understanding unfamiliar surroundings while travelling.

06. Professional

Explore potential support for document reading, workplace accessibility and everyday office tasks.

07. Everyday Awareness

Provide voice-based information about relevant elements of the surrounding environment.

08. Industrial

Potential use cases include hazard awareness, equipment identification and guidance in complex work environments.

Section 02.7: FAQ

01. What are MyBlyk AI Glasses?

MyBlyk AI Glasses are AI-powered smart glasses being developed primarily for visually impaired and blind users. They are designed to help users access visual information and better understand their surroundings through voice-based interaction.

02. Do MyBlyk AI Glasses work without the internet?

Selected core safety-oriented capabilities are being designed around on-device Edge AI, reducing the need for constant internet connectivity for those functions.

More complex or computationally intensive capabilities may require mobile or cloud processing.

03. What can MyBlyk AI Glasses currently do?

MyBlyk is at the prototype and development stage. Object detection has been confirmed, while capabilities such as text reading, scene understanding and other functions have reached different prototype or development stages.

The final commercial capability set is still being developed.

04. How does MyBlyk provide information to the user?

MyBlyk is designed around voice/audio output. The current product concept uses an open-ear speaker positioned on the right-hand-side temple to communicate information to the user.

05. When will MyBlyk AI Glasses be available?

MyBlyk is progressing from proof-of-concept development towards product-design prototyping and testing. The planned roadmap targets consumer launch in April 2027, subject to development progress.

06. Can people with partial vision use MyBlyk?

MyBlyk is being developed primarily for visually impaired and blind users. Suitability for different levels of vision loss will depend on the final product capabilities and individual needs.

07. Do the glasses guarantee safety or replace human assistance?

No. MyBlyk is being developed to support environmental awareness and access to information. It should not be treated as a guarantee of safety or a complete replacement for mobility aids, human assistance or personal judgement.

Built on Belief,
Driven by Purpose

Supporting copy

MyBlyk is being built on a simple belief: technology should help people access more of the world around them, with greater confidence and independence.

Section 03.2: Our Story

Eyebrow

FOUNDERS' THOUGHTS

H2

A Problem We Couldn't Ignore

Supporting Copy

MyBlyk's story began much closer to home. As Tushar's uncle gradually experienced significant vision loss, we began to see how even everyday activities could become challenging, making independence harder and reliance on others increasingly necessary. Around the same time, Khushboo's work in assistive technology research at a reputed defence research institution, focused on solutions for people who are blind or visually impaired, gave her a deeper understanding of the challenges people face beyond vision loss itself. Together, these experiences helped us recognize something important: the need was not just for better vision assistance, but for technology that could help people navigate the world with greater confidence, freedom, and independence.

As we researched the problem further, we realized that what we had experienced personally was part of a much larger global challenge. More than 7.5 Cr people in India live with some form of vision impairment, with significant social and economic consequences.

We began asking a practical question: can technology help people understand their environment and gain greater independence? That question became the foundation of MyBlyk.

OUR VALUES

H2

What We Stand For

01. Human First

Technology should solve real problems and make everyday life more manageable.

02. Accessibility First

Assistive technology should be practical, useful and designed around the people who need it.

03. Independence

Aim to help people access information, understand their surroundings and manage everyday activities with greater confidence.

04. Responsible AI

Build with awareness of privacy, limitations and the real-world impact of AI.

05. Safety Matters

Design around useful assistance while respecting the limits of technology and human judgement.

06. Innovation & Affordability

Aim to develop practical technology that continues to improve while keeping accessibility and affordability in mind.

Category 01: Product & Capabilities

Category button: Product & Capabilities

Q1. What are MyBlyk AI Glasses?

MyBlyk AI Glasses are AI-powered smart glasses being developed primarily for visually impaired and blind users. They are designed to help users access visual information and better understanding of their surroundings through voice-based interaction.

Q2. What can MyBlyk AI Glasses help users do?

MyBlyk is being developed to support activities such as identifying objects, reading text, understanding surroundings and accessing relevant information through voice. Some capabilities have been tested at the prototype stage, while others remain under development.

Q3. Can MyBlyk AI Glasses read printed text?

Text reading has been tested at the prototype stage. The aim is to help users access information from everyday text, such as labels, signs and documents. Performance may vary depending on text visibility, lighting, camera view and other conditions.

Q4. Can MyBlyk recognize objects and describe the surroundings?

Object detection has been confirmed, while object recognition and real-time environment description have been tested at the prototype stage. Broader scene understanding is still being tested, so the final capability set may differ from current prototypes.

Q5. Are all MyBlyk AI Glasses features available today?

No. MyBlyk is progressing through product development and testing. Some functions have been confirmed or prototype-tested, while features such as navigation assistance, face recognition and distance estimation remain under development. The final commercial features will be communicated as they are validated.

Category 02: Technology & Connectivity

Category button: Technology & Connectivity

Q1. How do MyBlyk AI Glasses work?

MyBlyk is being developed to capture visual information, process it using AI and communicate relevant information through voice. Its architecture combines visual input, sensor data, computer vision, decision-making and audio output.

Q2. What is Edge AI in MyBlyk AI Glasses?

Edge AI means processing selected AI tasks directly on a device rather than depending entirely on a remote server. MyBlyk is being designed to use on-device intelligence for selected core safety-oriented functions, helping reduce unnecessary dependence on mobile phone' or cloud processing.

Q3. Do MyBlyk AI Glasses work without the internet?

Selected core safety-oriented functions are intended to use on-device Edge AI, reducing the need for constant internet connectivity for those tasks. More complex or computationally intensive functions may require a connected mobile device or cloud processing. MyBlyk should not be described as completely offline.

Q4. Do MyBlyk AI Glasses connect to a smartphone?

The current architecture is designed to connect with a mobile device through Bluetooth Low Energy (BLE) for broader system functionality. The exact pairing process, supported devices and final software requirements will be confirmed as the commercial product develops.

Q5. How do MyBlyk AI Glasses communicate information to users?

MyBlyk is designed around voice-based output so users can receive relevant information without needing to read a screen. The current product concept uses one open-ear speaker positioned on the right-hand-side temple. Final product details will be confirmed before commercial availability.

Category 03: Privacy, Safety & Trust

Category button: Privacy, Safety & Trust

Q1. How does MyBlyk approach privacy?

MyBlyk recognizes that privacy is important for AI-powered wearables. The product is being developed with consideration for where information is processed and when mobile or cloud connectivity may be needed. Specific data-handling practices should be reviewed in the published Privacy Policy and final product documentation.

Q2. Are MyBlyk AI Glasses always recording?

The final commercial camera and recording behaviour has not been established in the information currently approved for publication. We will communicate the product's actual capture, recording and storage behaviour before commercial availability rather than make an unverified privacy promise.

Q3. Is visual information processed on the glasses or in the cloud?

The planned architecture uses on-device processing for selected core functions, while more complex tasks may use mobile or cloud processing. The exact handling of each data type will depend on the implemented feature and will be explained in the applicable product and privacy documentation.

Q4. How accurate are MyBlyk AI Glasses?

There is no verified overall accuracy percentage available for the complete product. Object detection has been confirmed, and selected features have been prototype-tested, but results can vary with lighting, distance, camera view, scene complexity and the task being performed. Development and testing are ongoing.

Q5. Can MyBlyk replace a cane, guide dog or human assistance?

MyBlyk is being developed as an assistive technology companion, not as a guaranteed replacement for a cane, guide dog, trained support or a user's own judgement. Users should continue to rely on established mobility aids and appropriate safety practices, particularly in traffic and other hazardous environments.

Category 04: Pricing, Pre-Booking & Availability

Category button: Pricing, Pre-Booking & Availability

Q1. How much does it cost to pre-book MyBlyk AI Glasses?

The currently listed pre-booking amount is ₹999. Please review the applicable terms on the official website before making a payment. The pre-booking amount should not be interpreted as the final product price.

Q2. What is the expected price of MyBlyk AI Glasses?

The current website pricing direction lists an MRP of ₹29,999 and an expected launch-price range of ₹22,XXX–₹25,XXX. These are indicative website figures, not a confirmation of the final payable price. The final price and applicable terms will be announced officially.

Q3. When will MyBlyk AI Glasses launch in India?

The current roadmap lists Beta Trial for January 2027 and Consumer Launch & Scale for April 2027. These are planned milestones, not a guarantee of a specific delivery date. Timing may change as product development, testing and launch preparation progress.

Q4. Is the ₹999 pre-booking amount refundable?

The final pre-booking refund conditions are still being established. Please check the applicable pre-booking terms presented on the official website before paying. Do not assume that a refund is automatic or guaranteed unless the published terms explicitly provide for it.

Q5. Will MyBlyk AI Glasses require a paid subscription?

The subscription model, pricing and included benefits have not been finalized. Any future subscription plans, optional services or free access periods will be communicated through official product information once the details are confirmed.

Category 05: Everyday Use & Accessibility

Category button: Everyday Use & Accessibility

Q1. Who are MyBlyk AI Glasses being developed for?

The primary audience is visually impaired and blind users, including adults and older people who may benefit from greater access to visual information. MyBlyk is also exploring broader use cases for people who want AI-assisted environmental understanding during everyday activities.

Q2. Can MyBlyk help with everyday tasks such as shopping, reading and travel?

MyBlyk is being developed around everyday situations where visual information matters, including reading text, understanding objects, shopping, travelling and accessing information in professional environments. The level of support depends on each feature's development and testing status.

Q3. Can MyBlyk help users navigate unfamiliar places?

Navigation-related assistance is under development. MyBlyk aims to improve environmental awareness and help users access relevant information, but it should not be treated as a fully validated navigation system or a guarantee of safe movement.

Q4. What are the Assist, Echo and Explorer Series?

Assist is designed around accessibility and everyday assistance for visually impaired and blind users. Echo is a planned experience for people with partial hearing loss. Explorer is intended for travelers, explorers, students and researchers who want AI-assisted environmental understanding. Their availability and capabilities differ by series.

Q5. Can MyBlyk help users become more independent?

MyBlyk aims to support greater independence by making selected visual information easier to access and helping users understand aspects of their surroundings. It is intended to complement existing skills, mobility aids and support systems, not to promise complete independence or remove every everyday barrier.

Category 06: Company & Partnerships

Category button: Company & Partnerships

Q1. Which company is developing MyBlyk AI Glasses?

MyBlyk is an assistive technology brand being developed by Trinetrum Ventures Private Limited, an India-based company working across AI, computer vision, Edge AI and assistive technology.

Q2. Where is Trinetrum Ventures Private Limited based?

The company's registered office is in Kanth, Moradabad district, Uttar Pradesh, India. MyBlyk follows an India-first approach, with future expansion depending on product readiness and business development.

Q3. Does MyBlyk work with NGOs and accessibility organizations?

MyBlyk welcomes relevant enquiries from NGOs, accessibility organizations, hospitals, institutions and other groups interested in assistive technology. Potential collaborations can be discussed through the Contact Us page; any specific partnership should be confirmed before it is represented as established.

Q4. Can investors contact Trinetrum Ventures about MyBlyk?

Yes. Investors interested in learning about MyBlyk can contact Trinetrum Ventures through the official contact details. An enquiry is an opportunity to begin a conversation and does not imply that funding is currently open, guaranteed or already secured.

Q5. How can I contact the MyBlyk team?

You can reach the team at trinetrumventures@gmail.com or call +91 85329 99824. For partnership, investor or general enquiries, visit the Contact Us page and select the relevant enquiry type.
